

Here's a professional prompt you can use with **Google AI Studio, Claude, Cursor, Lovable, Bolt, or any AI coding agent** to enhance your **Add Transaction** feature while maintaining the premium fintech design of Savorah.

Prompt: Upgrade "Add Transaction" into an AI-Powered Smart Transaction Import Hub

You are a **Senior Product Designer, Frontend Architect, and FinTech UX Engineer** with experience building products like **CRED, Ramp, Mercury Bank, Stripe, and Splitwise**.

Your task is to redesign the "**Add Transaction**" flow in **Savorah** into an intelligent, AI-powered transaction import experience.

The current modal only supports manual transaction entry.

I want to transform it into a **Smart Transaction Hub** that lets users create transactions using multiple input methods while preserving the existing premium design system.

Goal

Allow users to add transactions in four different ways:

1. Manual Entry (existing)
2. Scan Bank Receipt
3. Import Bank Statement
4. Paste Mobile Payment SMS

All methods should eventually populate the same transaction form before saving.

The AI should automatically extract and categorize transaction details.

Design Requirements

Do **NOT** redesign the overall UI.

Keep:

- Existing color palette

- Typography
- Glassmorphism cards
- Rounded corners
- Shadows
- Premium fintech feel
- Existing spacing
- Existing animations

The new features should feel like they were always part of Savorah.

New Transaction Modal

Instead of immediately showing the form, redesign the top section into an intelligent transaction selector.

Example layout:

```
+-----+
| Add Transaction |
|-----|
| Choose how you'd like to add your transaction |
| |
| ➡ Manual Entry |
| 📷 Scan Bank Receipt |
| 📄 Import Bank Statement |
| 📱 Paste Payment SMS |
|-----+
```

Selecting an option reveals the corresponding interface with smooth transitions.

Use Framer Motion.

Method 1 — Manual Entry

Keep the existing form.

Improve:

- Better spacing
- Smart validation
- Auto-complete categories
- Better date picker
- Better payment selector

- Improved Auto-Tag interaction
-

Method 2 — Scan Bank Receipt

Create a premium upload experience.

Features:

- Drag & Drop
- Browse Files
- Camera Upload (mobile)
- Image Preview
- PDF Support

Supported:

- JPG
- PNG
- JPEG
- PDF

After upload:

Show AI Processing animation.

Example:

Scanning Receipt...

Reading Amount...

Extracting Merchant...

Detecting Date...

Categorizing Transaction...

Show loading skeleton.

After extraction:

Automatically fill:

- Merchant Name
- Amount
- Date

- Category
- Payment Method

User can edit everything before saving.

Display AI confidence score.

Example:

AI Confidence

98%

If confidence is low:

Highlight fields requiring review.

Method 3 — Import Bank Statement

Support:

- CSV
- Excel (.xlsx)
- PDF statements

Upload UI should match receipt upload.

After upload:

Show AI parsing progress.

Example:

Uploading...

Reading Statement...

Found 38 Transactions...

Categorizing...

Done

Then show a beautiful preview table.

Columns:

- Date

- Description
- Amount
- Category
- Status

Each row should have:

✓ Import

or

Ignore

User can:

- Import all
- Import selected
- Edit before importing
- Search
- Filter
- Remove duplicates

Show duplicate detection.

Example:

"This transaction already exists."

Method 4 — Paste Mobile Payment Message

Support messages from:

- Google Pay
- PhonePe
- Paytm
- BHIM UPI
- Bank SMS
- Credit Card SMS

Interface:

Large text area.

Placeholder:

Paste your payment message here...

Example:

Rs.560 spent using SBI Credit Card at Reliance Fresh on 23 Jul 2026.

or

₹1,250 paid to Swiggy via UPI Ref No. XXXXX

Button:

✨ Analyze Message

Show AI typing animation.

Extract:

- Amount
- Merchant
- Date
- Payment Method
- Category

Auto-fill transaction form.

AI Extraction Flow

Regardless of input method:

Image

OCR

Transaction Extraction

Merchant Detection

Amount Detection

Date Detection

Payment Method Detection

Category Prediction

Confidence Score

Review Screen

Save Transaction

Represent this visually with a stepper or progress indicator during processing.

Smart Categorization

AI should predict category.

Examples:

Swiggy → Food

Uber → Transport

Amazon → Shopping

Salary → Income

Electric Bill → Utilities

Hospital → Healthcare

Allow changing category manually.

Duplicate Detection

Before saving:

Compare with existing transactions.

If duplicate exists:

Show warning.

"This appears to be an existing transaction."

Options:

- Skip
 - Save Anyway
 - Replace Existing
-

Review Screen

Before final save:

Display extracted data inside beautiful editable cards.

Example:

Merchant

Amazon India

Amount

₹1,599

Category

Shopping

Date

23 Jul 2026

Payment

Credit Card

Source

Receipt Scan

Confidence

97%

Micro Interactions

Use premium animations.

Examples:

- Upload hover glow
- Drag-over highlight
- AI scanning animation
- Receipt scanning beam
- Progress indicators
- Success checkmark
- Auto-fill animation
- Category badge animation
- Skeleton loading
- Fade transitions

Everything should feel alive.

Mobile Experience

On mobile:

Replace upload with:

Take Photo

Choose from Gallery

Upload PDF

The modal becomes a full-screen bottom sheet.

Large touch targets.

Responsive layout.

Accessibility

Support:

- Keyboard navigation
 - Screen readers
 - Focus states
 - Drag & Drop accessibility
 - Proper labels
 - Error announcements
-

Technical Architecture

Create reusable components:

TransactionMethodSelector

ReceiptUploader

StatementImporter

SMSParser

OCRProgress

ImportPreviewTable

DuplicateDetector

AIExtractionCard

TransactionReview

ConfidenceBadge

UploadDropzone

Keep business logic separate from UI.

Create services:

receiptParser.ts

statementParser.ts

smsParser.ts

ocrService.ts

transactionImporter.ts

duplicateChecker.ts

Use mock AI services for now so the UI is fully functional without a backend.

Expected User Flow

Receipt Scan

Add Transaction

Scan Receipt

Upload Image

AI Processing

Extract Details

Review

Save

Bank Statement

Import Statement

Upload CSV/PDF

AI Parse

Preview Transactions

Select Transactions

Import

SMS

Paste SMS

Analyze

Extract

Review

Save

Success Criteria

The new Add Transaction experience should feel like a modern AI-powered finance application rather than a basic data entry form. Every import method should reduce manual work, maintain consistency with Savorah's premium design language, and provide a seamless, trustworthy workflow that allows users to verify AI-extracted information before saving. The implementation should be fully responsive, accessible, reusable, and production-ready.
